Trapeza AB
Mariatorget i Stockholm

A Business Case for STPIS'19

The background

Trapeza is a Swedish startup company providing a solution for creating trust, transparency and facilitating electronic transactions. The principles on which the business is built are security, integrity and transparency. Around the basic function of being able to exchange personal information in a safe and controlled manner, the service will offer various forms of analysis, decision support and mediation of services. Trapeza also offers the management of personal information to meet the requirements of the GDPR in providing the individual with access to information about the treatment and legal basis for it.

Trapeza is a product and service company but not primarily a Fintech company but rather a provider of secure information. The company will initially launch its services in Sweden and then, it will look to extend the market to the rest of the Nordic countries before contemplating offering the service in the rest of Europe.

The problems Trapeza is addressing

1. An individual's data is seen as a commodity that can be owned and traded, without concern for the effect on the individual
2. It is difficult for a data controller to make sure he complies with the legislation and ethical standards for data processing
3. The supervisory bodies have practical difficulties with supervising and policing abuse and fraud in the digital domain
4. The risk of suffering digital fraud and abuse for both individuals and organisations

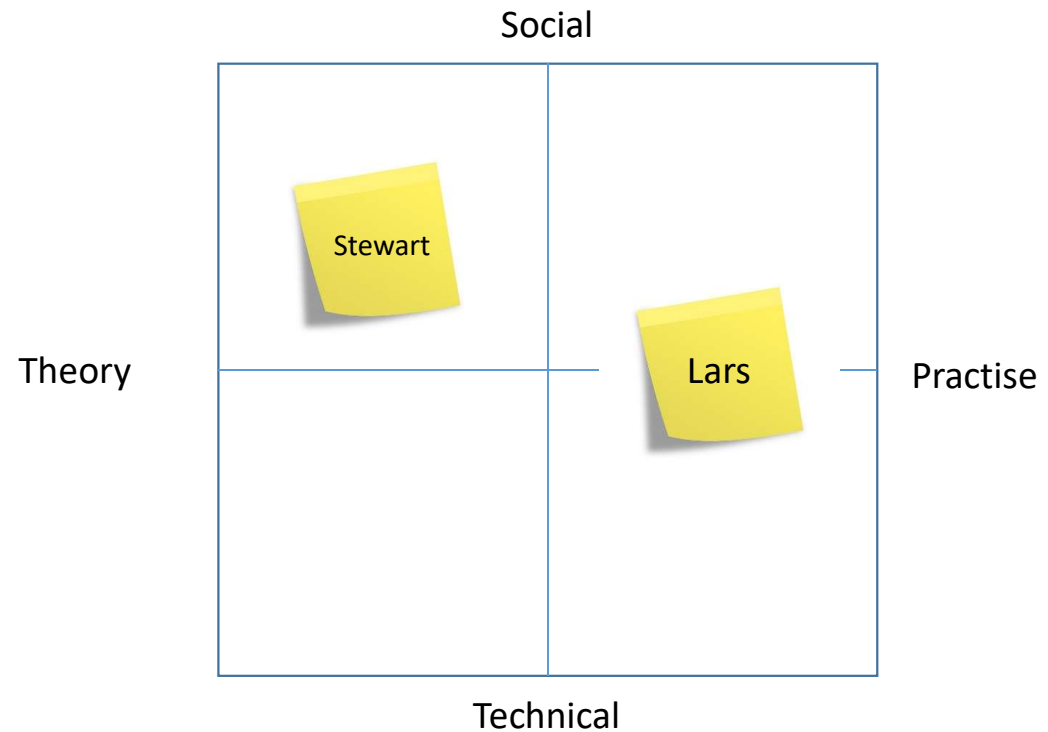

Introduction

Box yourself in!

Work Plan

- A. Write you name on a sticky note
 - 1. Print Your name:
 - 2. Think : Which box did you mainly work last week?
- B. Come to the front /wall
